

Oxyzone's C80H CUBE Ozone Generator

User Guide

Prior to commencement of treatment:

- Close all external doors and windows
- Close all curtains because odours get caught in the folds
- Open all internal doors and drawers & cupboards
- Turn the air conditioning off
- If all rooms in the room/cabin are affected it is helpful to put the machine in each room for a short time say 10 minutes and in the main odour affected area for the majority of the treatment.
- Make sure that all internal doors are open so that the ozone can circulate
- At the end of the treatment run the air conditioning for 5-10 minutes with the **ozone generator off** as it helps remove lingering odours in the air conditioning system.

Set timer in countdown mode following the instruction on the bottom of the CUBE

Depending on severity of problem

Place machine on table or bench in the most affected room.

Cigarette smoke	2 hours may require further treatments
Pungent Food odours	1-2 hours
Sickness	1-2 hours
Spilt alcohol	1-2 hours
Wet carpet	maximum 4 hours

Note: If you find that there is a smell of ozone after the treatment open all doors and windows to let fresh air in and run the air-conditioning for about 10 minutes.

Or

Cut down the amount of time the CUBE is set for, ie: Pungent food odours run for only 1 hour that maybe sufficient. Not all rooms or cabins are the same size so you can vary the time quite easily.

The CUBE can be put in the vacant cabin/room when vacant but should be set for the minimum timer required.

People Pets and plants must not be in the rooms/cabins while the ozone machine is running

Never leave ozone running over night better little and often works better than a big hit
