

**Silver Hospitality user guide
S11 & S12 models**

Prior to commencement of treatment:

- Close all external doors and windows
- Close all curtains because odours get caught in the folds
- Open all internal doors and drawers & cupboards
- Turn the air conditioning off
- If all rooms in the apartment/rooms are affected it is helpful to put the machine in each room for a short time say 10 minutes, then in the main odour affected area for the majority of the treatment.
- Make sure that all internal doors are open so that the ozone can circulate
- At the end of the treatment run the air conditioning for 5-10 minutes with the **ozone generator off** as it helps remove lingering odours in the air conditioning system.
- If No air conditioning then open windows and doors to vent the room

Model S11E

Cigarette smoke (light odour)	one to one and a half hours max
Cigarette smoke heavy	repeat above daily for 1 to 2 weeks
Pungent food odours	up to 1 -1 1/2 hours
Sickness	one to one and a half hours
Spilt alcohol	one hour
Urine	2 hours if really bad per day repeat 1 week
Spot wet carpet	roughly one hour when almost dry

Model S12E

Cigarette smoke light odour	half to one hour
Pungent food odours	up to one and a half hours
Sickness	up to one hour
Spilt alcohol	half to one hour
Wet carpet	as above

Note: ozone has a metallic odour. If you find that there is a smell of ozone after the treatment open all doors and windows to let fresh air in and run the air-conditioning for about 10 minutes.

And/or

Cut down the amount of time the Silver Hospitality is set for ie: Pungent food odours run for only 1 hour that maybe sufficient. Not all rooms or apartments are the same size so you can vary the time quite easily.

The Silver Hospitality can be put in the vacant apartment/room at the end of the day but should be set for the minimum time required.

Never leave ozone running over night better little and often than a big hit.
